

MOHAMMED AKBAR HOSSEN

Laravel & Backend Developer

Feni, Bangladesh | mdakbar758742@gmail.com | +880 1814-758-742 | github.com/Akbar758742

PROFESSIONAL SUMMARY

Full-stack Laravel developer and final-year Computer Science and Engineering student who has contributed to company products spanning multi-vendor e-commerce, headless storefronts, delivery logistics, subscription commerce, job platforms, healthcare directories, and education portals. Comfortable owning a feature from database schema through API design to a production-ready frontend.

Currently expanding expertise in scalable software architecture, system design, DevOps fundamentals, AI/ML, and application security — with a particular interest in combining software engineering and artificial intelligence to solve practical, real-world problems.

TECHNICAL SKILLS

Backend: PHP, Laravel, Livewire, REST API Development, MVC Architecture, Repository Pattern, Sanctum/Passport Authentication, Redis & Queues, Business Logic Design, Database Design

Frontend: HTML5, CSS3, JavaScript, TypeScript, React, Next.js, Tailwind CSS, Bootstrap

Database & Caching: MySQL, PostgreSQL, MongoDB, Redis

Tools & Workflow: Git/ GitHub, npm, Vite, VS Code, Postman, SSH, Linux/VPS fundamentals

AI / Machine Learning: Python, Machine Learning fundamentals, OpenAI/LLM integration, HuggingFace, Recommendation Systems, TensorFlow

PROFESSIONAL EXPERIENCE

Backend / Full-Stack Developer — BugBuild

2026 – Present

Bangladesh

- Contribute as part of a company product team to a portfolio of live Laravel products spanning multi-vendor e-commerce, delivery logistics, subscription commerce, job platforms, healthcare directories, and education portals.
- Design and implement RESTful APIs (including a versioned v10 API) consumed by both server-rendered Laravel apps and a separate Next.js storefront.
- Build seller, inventory, warehouse, order, payment, wallet, and finance workflows for e-commerce and marketplace products.
- Implement authentication flows including OTP, social login, and Google reCAPTCHA, using both session- and token-based approaches.
- Diagnose and resolve issues across Laravel, PHP, database, deployment, and environment layers.
- Collaborate using Git-based development workflows within a multi-engineer product team.

SELECTED PROJECTS

Company products built collaboratively as part of the BugBuild product team.

Sellino — Multi-Vendor E-Commerce Platform

2026

Laravel • PHP • MySQL • REST API

- Contributed to a modular Laravel commerce platform covering storefronts, seller operations, catalog management, order fulfillment, payments, and customer accounts.
- Built features across inventory & warehouses, order & returns, delivery & shipping, wallet & finance, and point-of-sale modules.
- Worked within a versioned REST API (v10) also consumed by the Baillows Next.js storefront.

Baillows — Headless E-Commerce Storefront

2026

Next.js 16 • React 19 • TypeScript • Tailwind CSS

- Contributed to a typed, API-driven Next.js storefront consuming the Sellino Laravel API.

- Implemented authentication flows (OTP, registration, password reset, social login) using HTTP-only cookie sessions.
- Built checkout, protected account dashboards, wishlist, wallet, affiliate tools, and Laravel Reverb-based real-time chat and order updates.

JobNect — Job Listing Platform

2022 – 2026

Laravel • PHP • MySQL • Bootstrap

- Contributed to a job marketplace connecting candidates and employers.
- Built job listings, candidate/employer profiles, resume data, application tracking, subscriptions & payments, and location-aware search.

ParcelFly — Delivery Management System

2022 – 2026

Laravel • PHP • MySQL • REST API

- Contributed to a logistics platform managing the full parcel lifecycle — pickup requests, tracking, merchant accounts, hubs, and courier partners.
- Built domestic and international shipping features, COD payment workflows, and delivery finance/accounting modules.

Subsify — Digital Subscription Marketplace

2024 – 2026

Laravel • bootstrap • js • MySQL

- Contributed to a subscription marketplace for digital tools and software licenses.
- Built customer/seller/admin workflows, product variants, subscriptions & renewals, orders/payments, and commission/payout features.

Feni Doctor Info — Healthcare Directory

2025 – 2026

Laravel • PHP • MySQL • Tailwind CSS

- Contributed to a local healthcare discovery platform covering doctors, hospitals, ambulances, and blood banks/donors.
- Built doctor/hospital profiles, appointment requests, and district/upazila location-data features.

PGHSF Education Portal

2026

Laravel • bootstrap • js • Tailwind CSS

- Built notice board, teacher directory, gallery, blog, and contact-message features.

AI-Powered multivendor-ecommerce system

In Development

Thesis Project • AI • Python • Web Technologies

- Developing machine learning models for personalized product recommendations, dynamic pricing strategies, and AI-driven customer assistance
Exploring detection of scams, spam, malicious content, and security vulnerabilities using machine learning.
- Designing an architecture for integrating AI-based detection into web platforms.
- Investigating model training, evaluation, deployment, and application integration.
- Combining software engineering, cybersecurity, and AI into a single academic project
- Combining web technology frameworks, database management, and AI models into a scalable end-to-end e-commerce solution..

EDUCATION

Bachelor of Science in Computer Science & Engineering

2022 – 2026

Feni university • CGPA: 3.60

- Final-year CSE student
- Thesis: AI-Powered multivendor-ecommerce system
- Relevant coursework: Software Engineering, Web Development, Database Systems, Computer Networks, Information Security, Artificial Intelligence, Machine Learning
